HPS 2015 / shifted sigmoid*power*exp + tail
Scan [20, 130] MeV / N events = 2.145e+07
HPS 2016 10% / shifted sigmoid*power*exp + tail
Scan [42, 210] MeV / N events = 7.483e+06
HPS 2021 1% / sigmoid*power*exp + raw expquad
Scan [30, 250] MeV / N events = 1.096e+07
Observed data
Selected fit
Toy-ensemble mean
Counts / bin
$m_{e^+e^-}$ [MeV]
Shaded sidebands contribute to the toy normalization but lie outside the analysis scan range.
