

Deepest observed deficit in each dataset

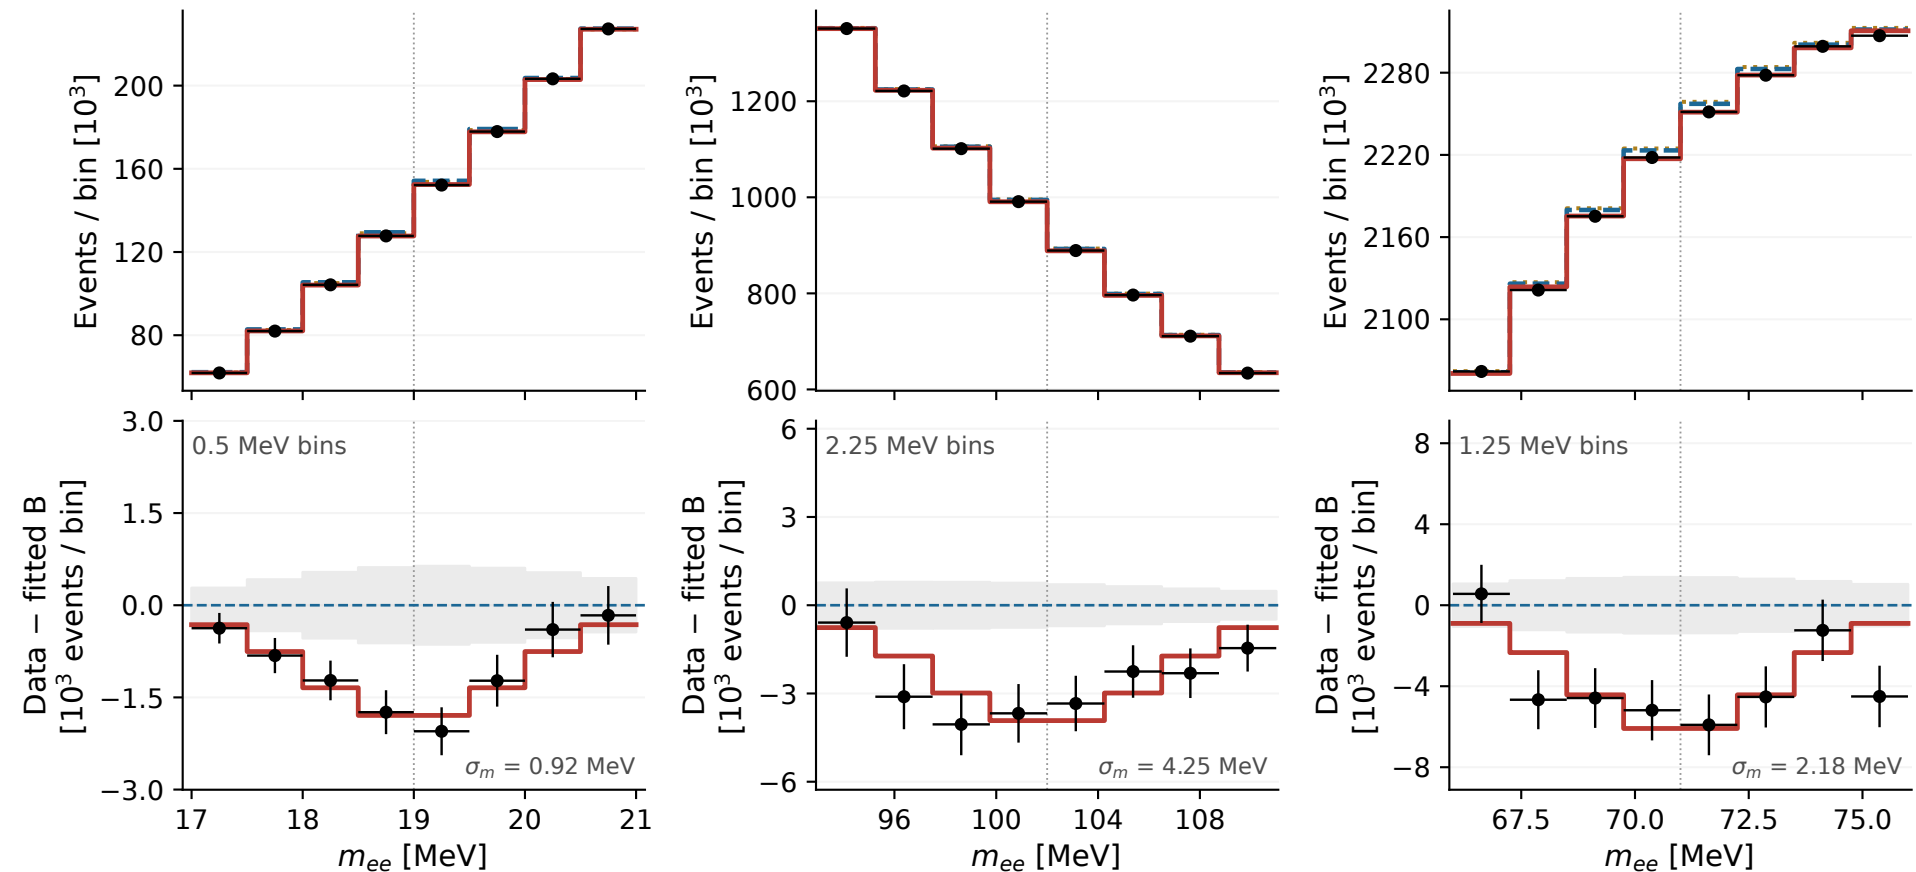

Independent fitted amplitudes | same profile construction and resolution-based binning

- Observed data
- Background fitted with signal
- GP constraint SD (width guide)
- ⋯ GP mean before profiling
- S+B (top); fitted S (bottom)

2015 full: 19 MeV, $r = -3.21$ (endpoint)

2016 full: 102 MeV, $r = -4.50$

2021 10%: 71 MeV, $r = -4.02$

The negative signal template is an auxiliary diagnostic of missing events; it is not a physical negative event rate.

Bars: counting error only. Gray shading: zero-centered GP constraint width; not fitted-background error or total residual uncertainty.
