

Observed limits with and without GP background uncertainty

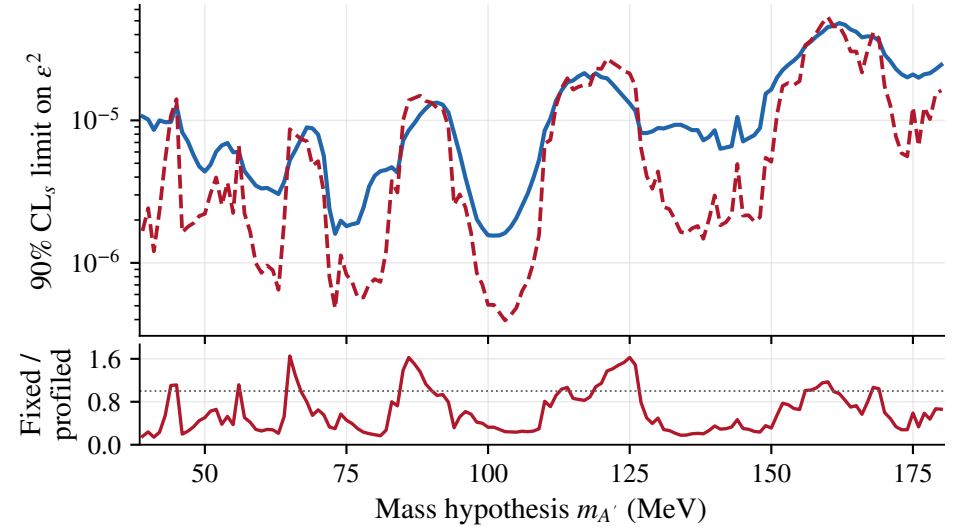

Frozen v4.9.12 inputs; identical masks, signal templates and yield conversion

— Released Gaussian profile - - - Fixed GP mean (uncertainty omitted)

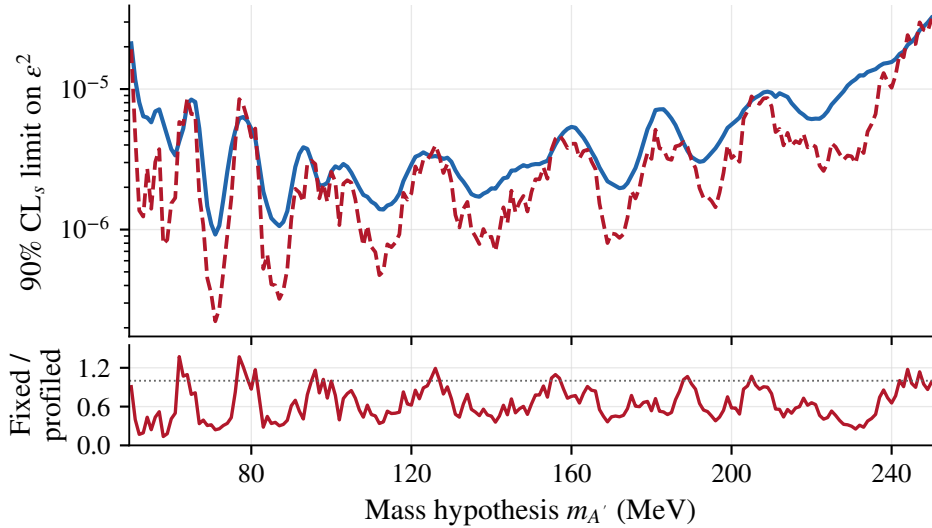

2015, full sample

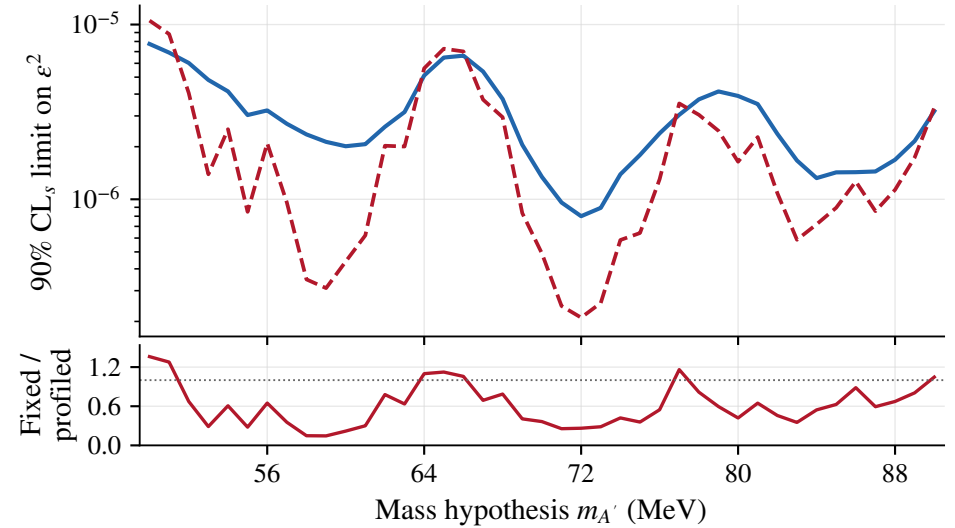

2016, full sample

2021, 10% sample

All three, shared coupling

Fixed-mean curves are conditional diagnostics; observed tightening does not establish improved sensitivity.
2016 and the combination inherit the disclosed numerical exception. The dimuon correction is applied once.
