

Dependence on the generating truth

Conditional observed 90% CL_s endpoint: archived stress truth / mass-local GP truth

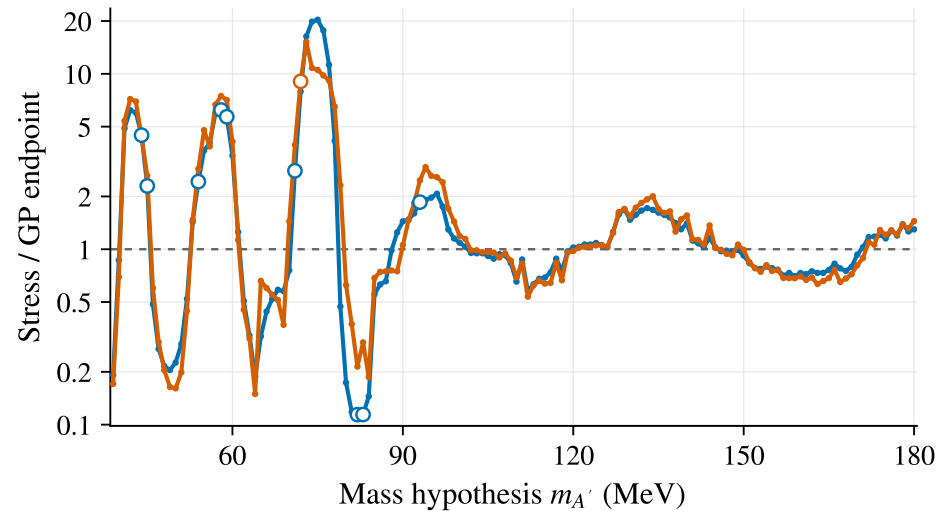

— Gaussian profile — Fixed GP mean ○ Limited MC precision

Complete mass grid: 456 of 456 mass hypotheses; each ratio uses two truth-specific endpoints

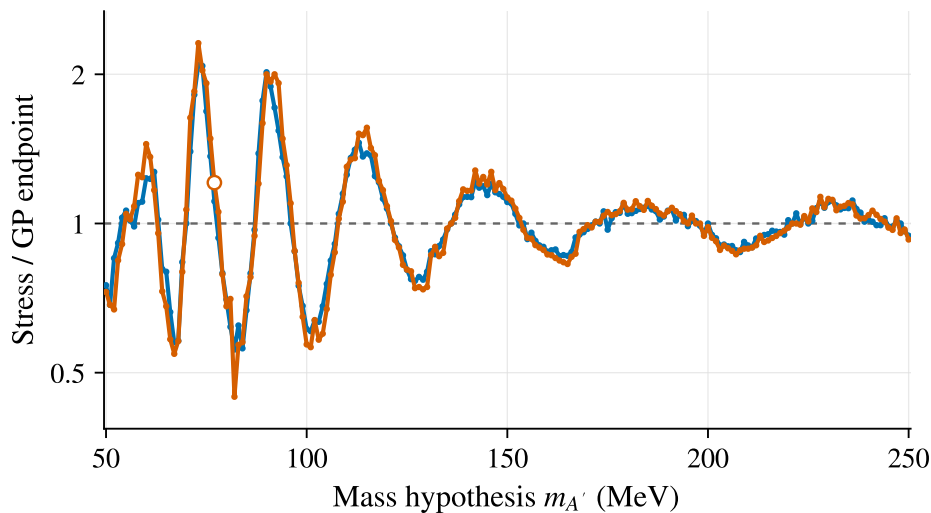

2015, full sample

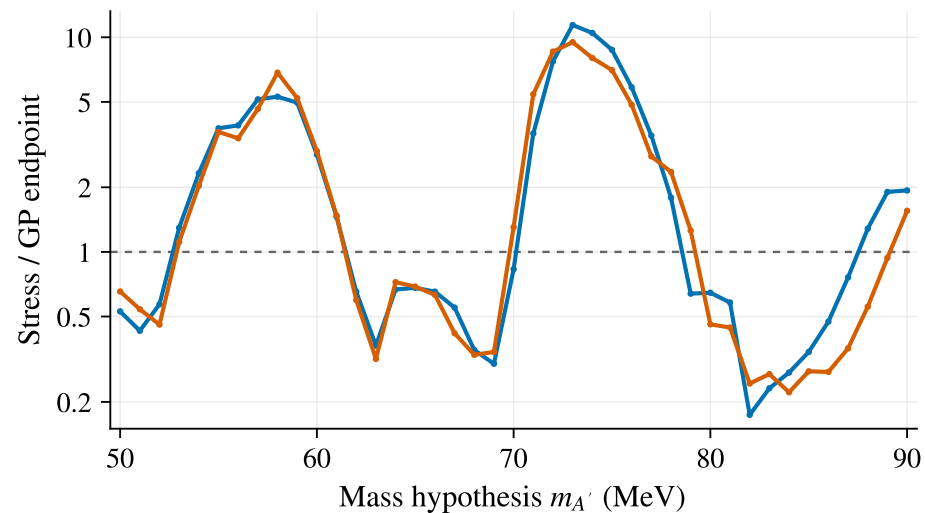

2016, full sample

2021, 10% sample

All three, shared coupling

The dashed line at 1 denotes equal observed endpoints; this ratio is not a coverage test.

Open circles: at least one endpoint has limited MC precision. Missing or censored endpoints leave gaps.

The all-three comparison covers two joint truth scenarios only; it does not cover every mixed constituent truth.
