

Leading combined observed excess: 66 MeV

Common-amplitude profile fit | signed root r = +2.76 | fitted amplitude = $+4.55 \times 10^{-6}$

- Observed data
- Background fitted with signal
- GP constraint SD (width guide)
- ⋯ GP mean before profiling
- S+B (top); fitted S (bottom)

All panels use the same fitted amplitude. The summed panel uses only common whole bins; the likelihood uses the complete native windows.

Bars: counting error only. Gray shading: zero-centered GP constraint width; not fitted-background error or total residual uncertainty.
