

Extraction calibration score by variant

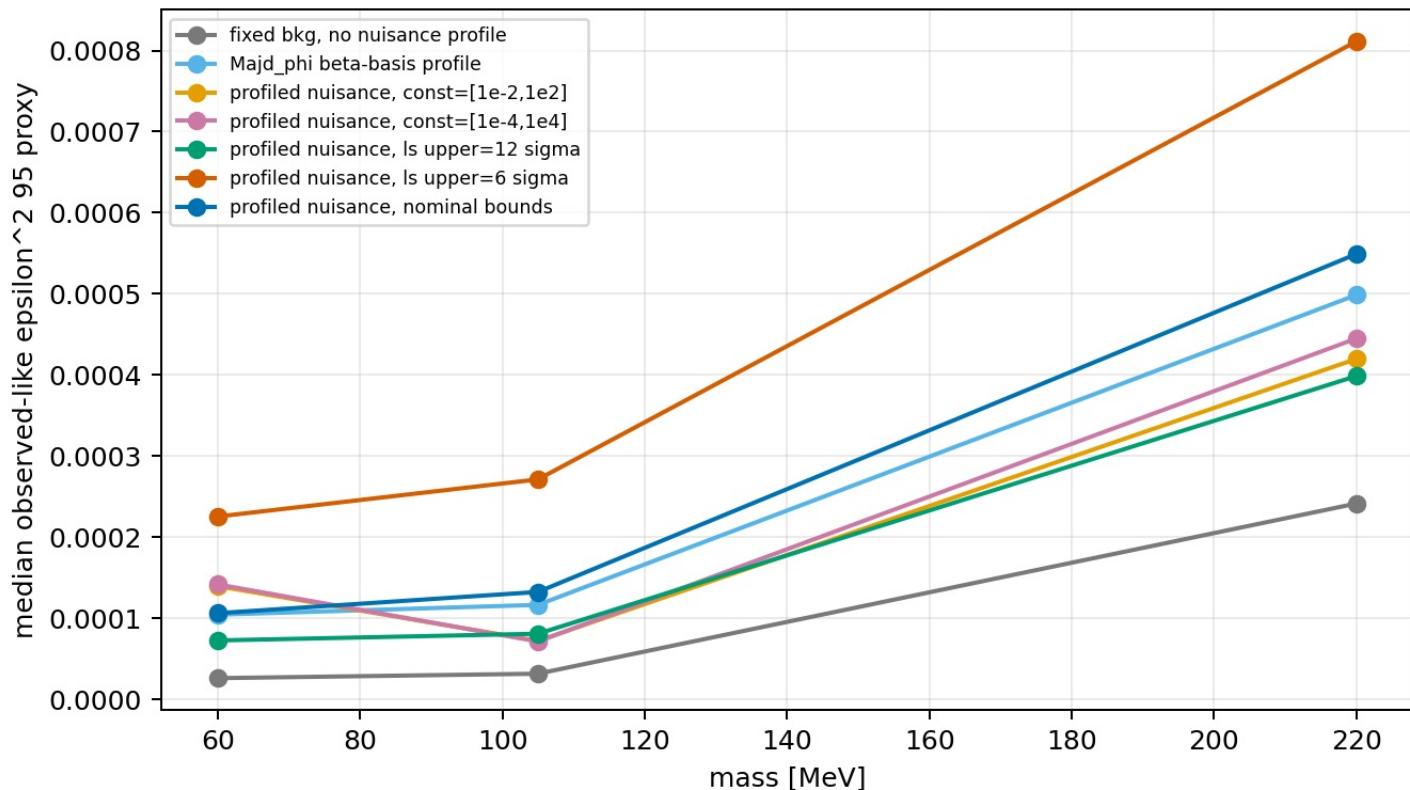

Reach impact by nuisance/kernel variant

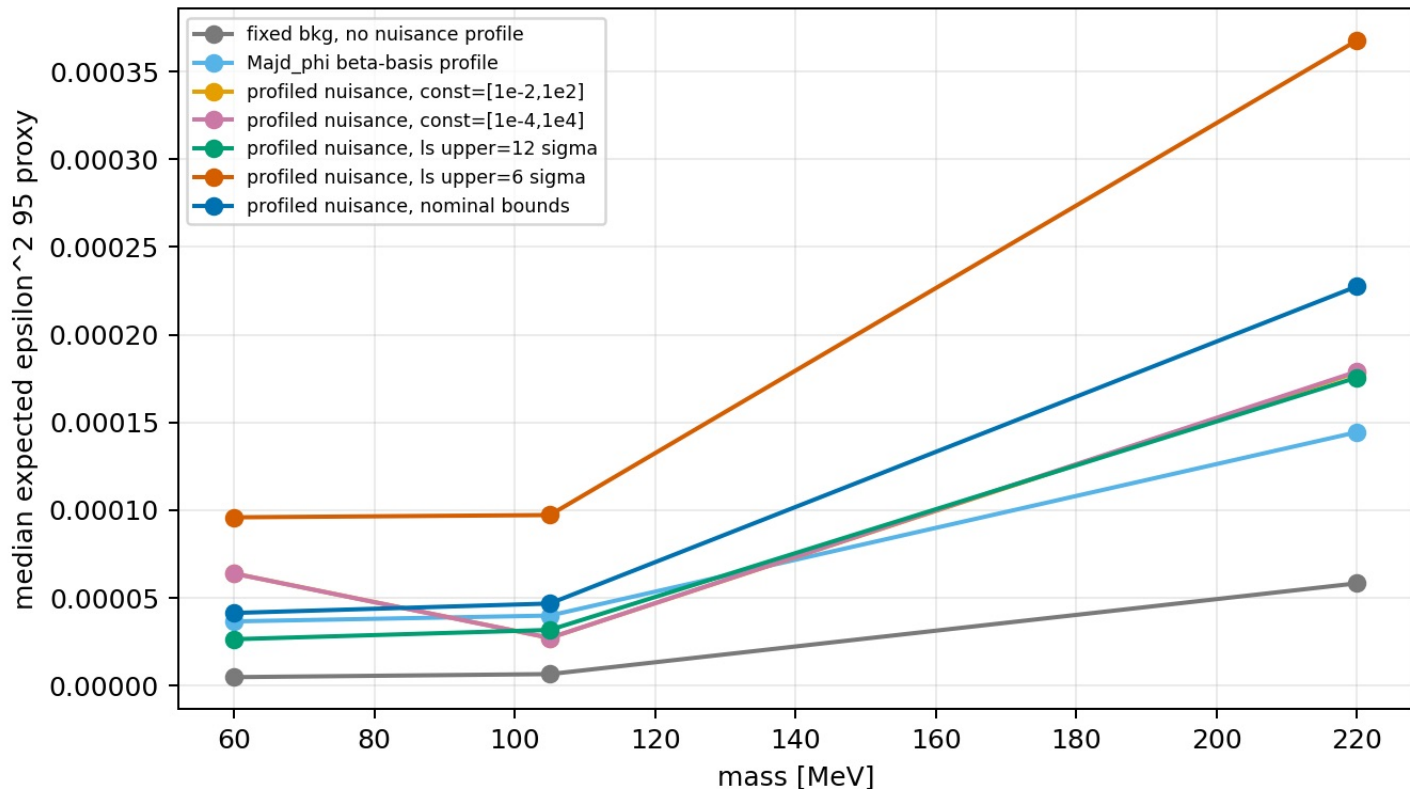

2021: ϵ^2 reach loss vs nominal profile

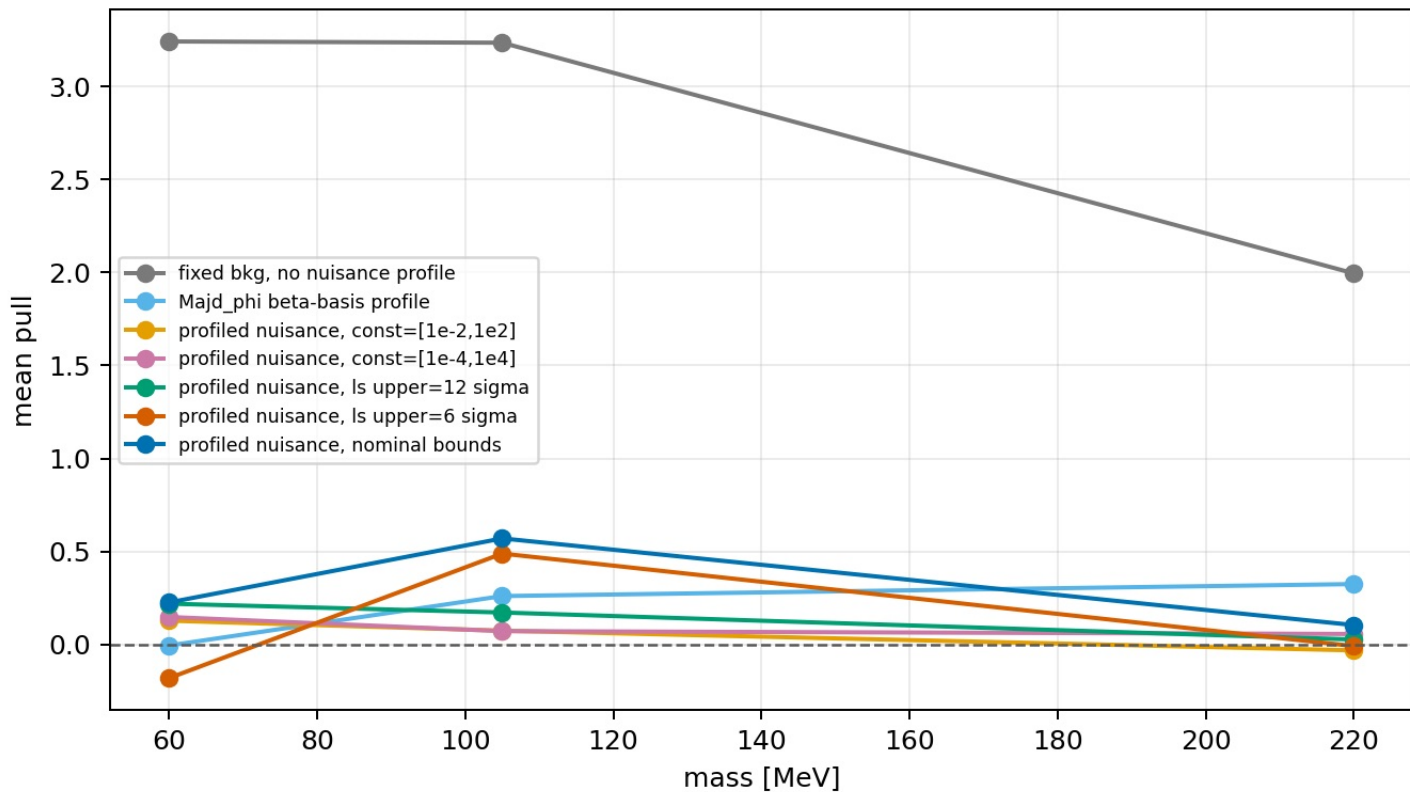

2021: median observed-like epsilon² 95 proxy, 10 source toys

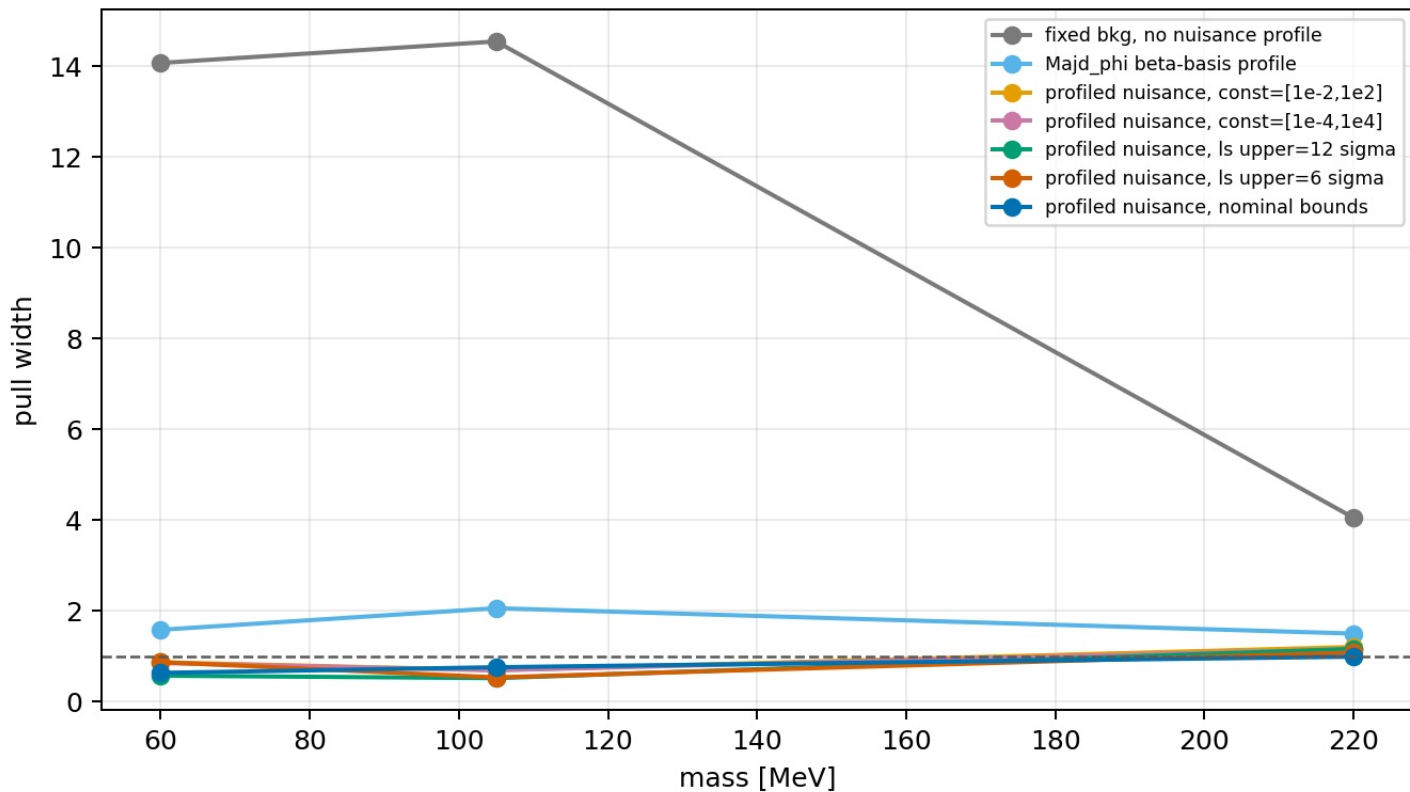

2021: median expected epsilon^2 95 proxy, 10 source toys

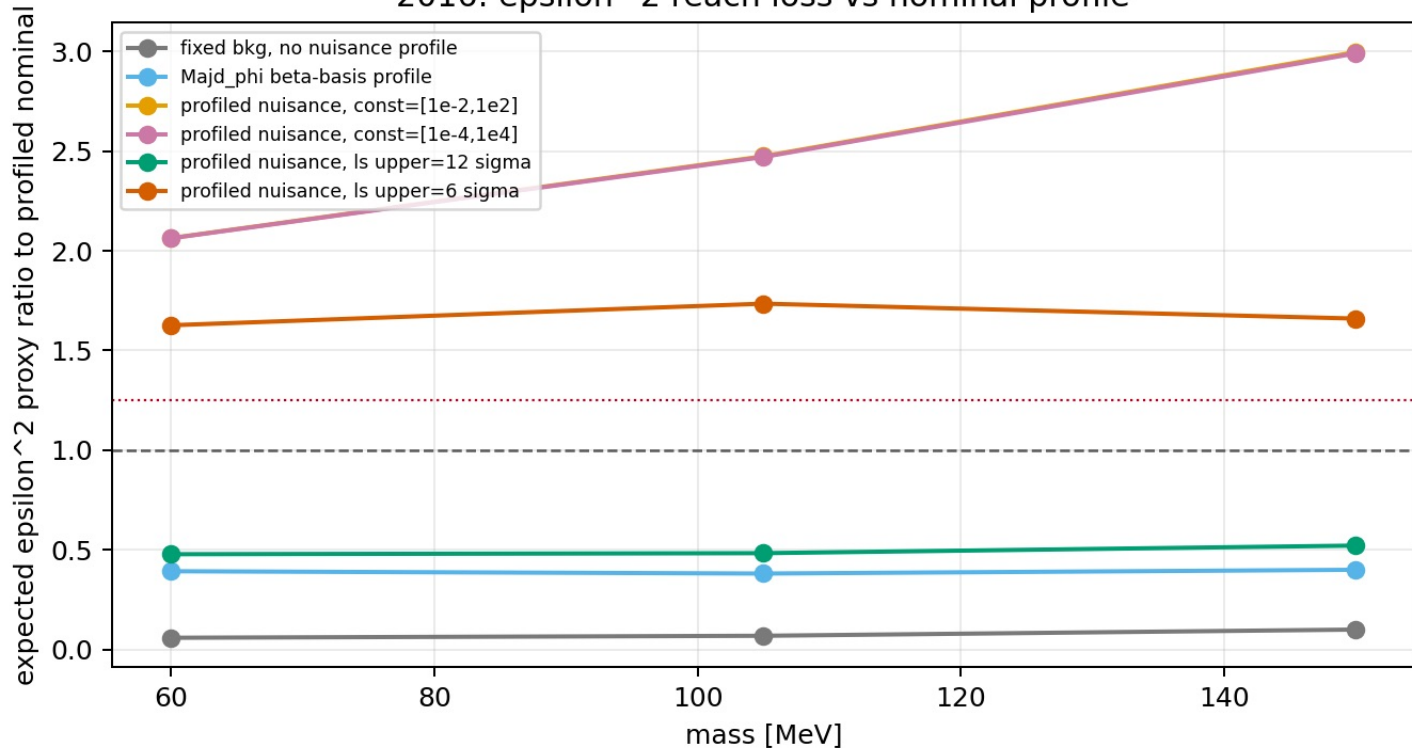

2021: mean pull, 10 source toys

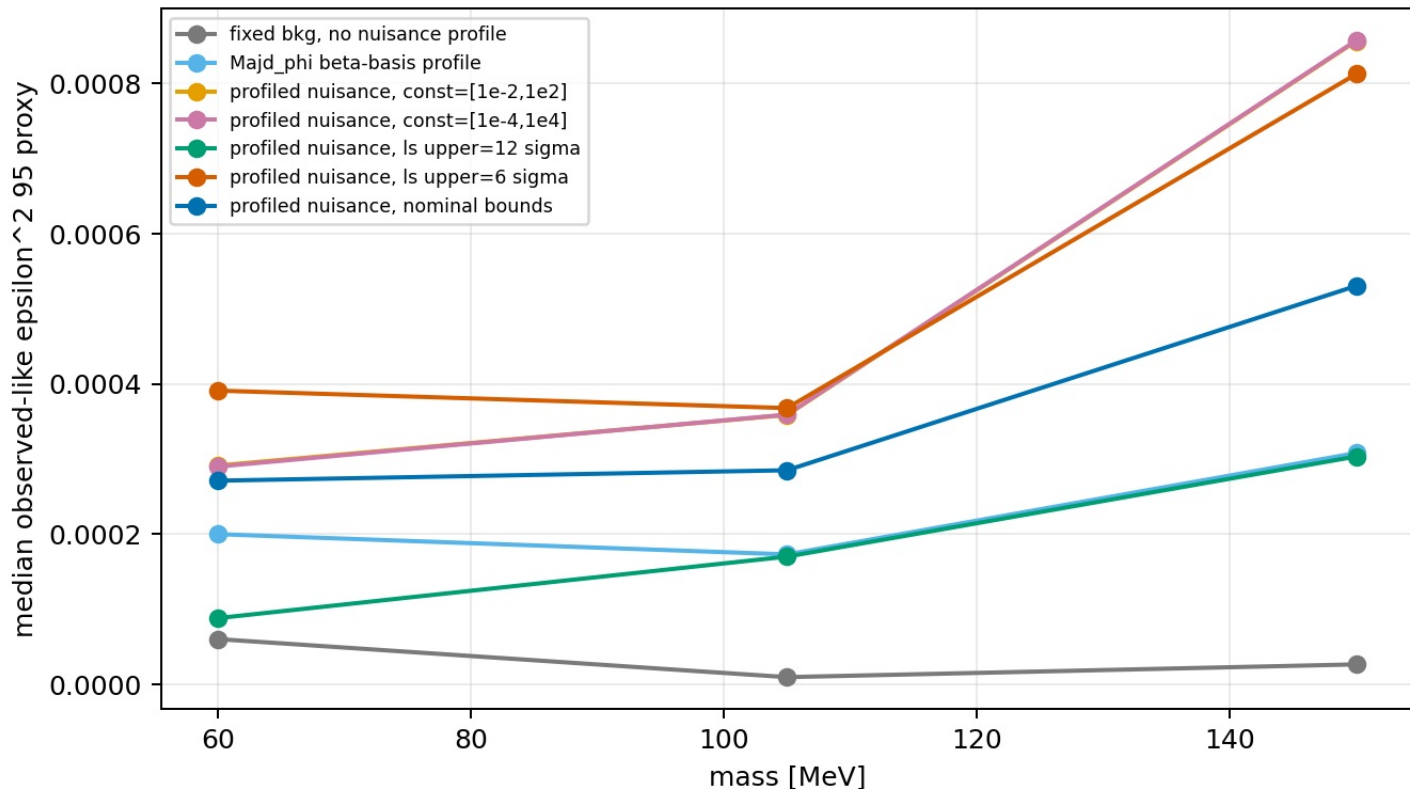

2021: pull width, 10 source toys

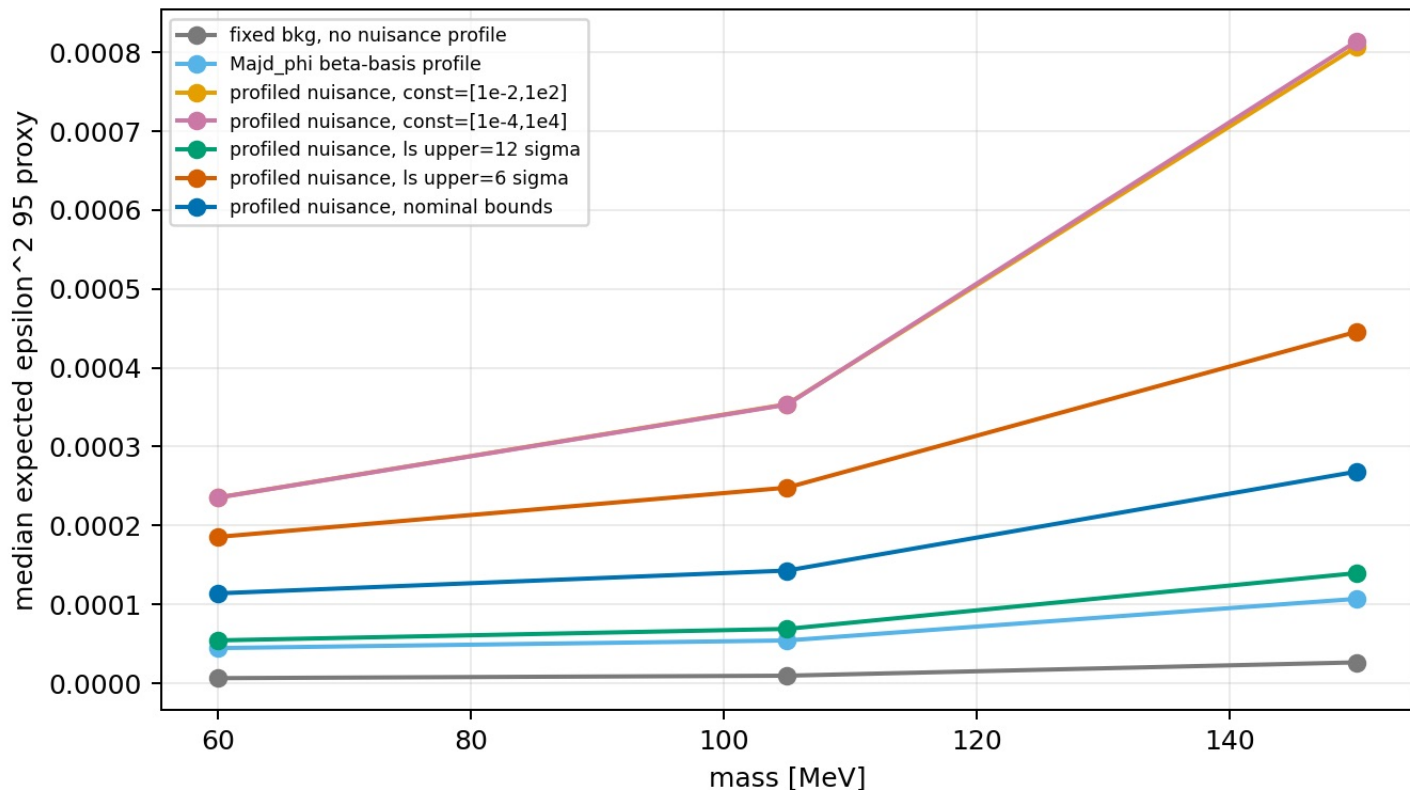

2016: ϵ^2 reach loss vs nominal profile

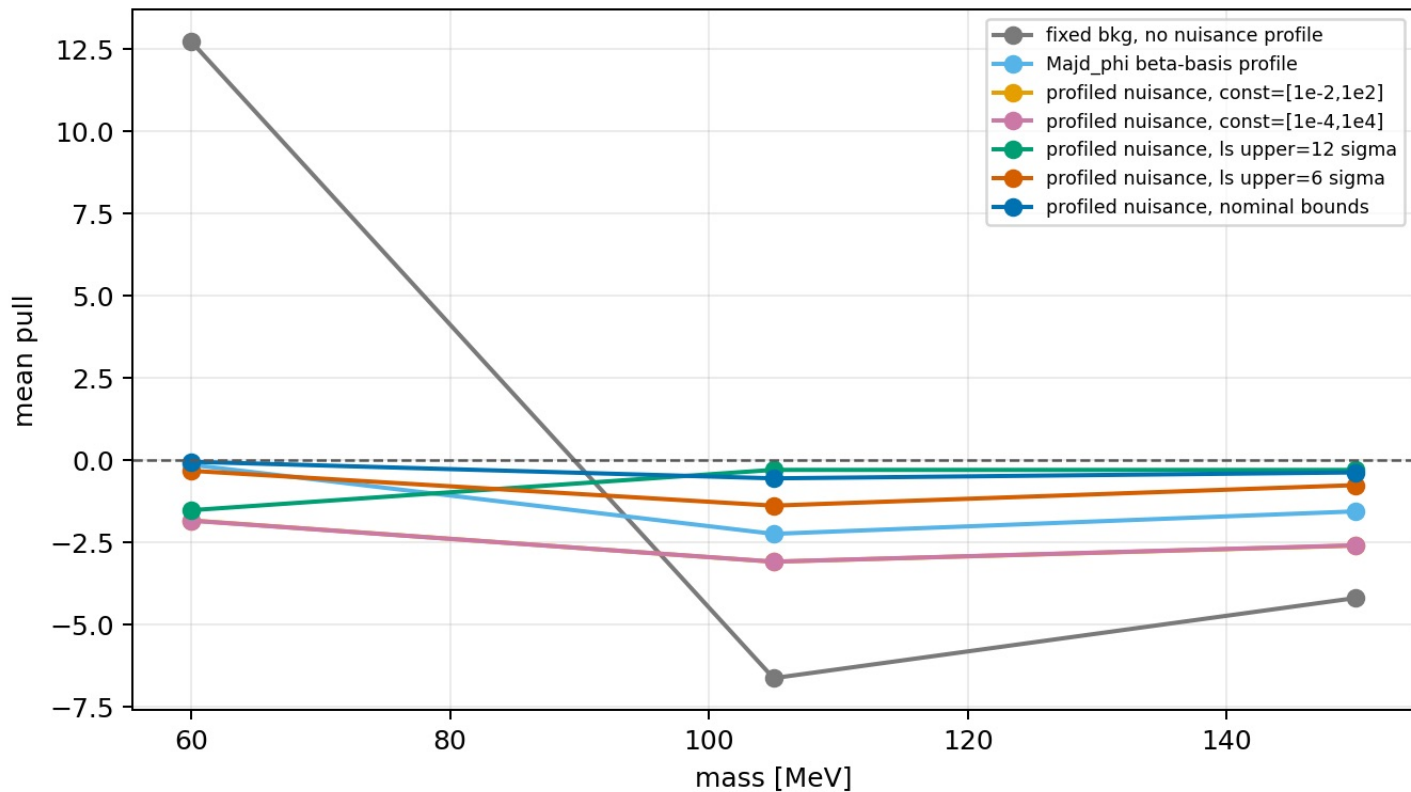

2016: median observed-like ϵ^2 95 proxy, 10 source toys

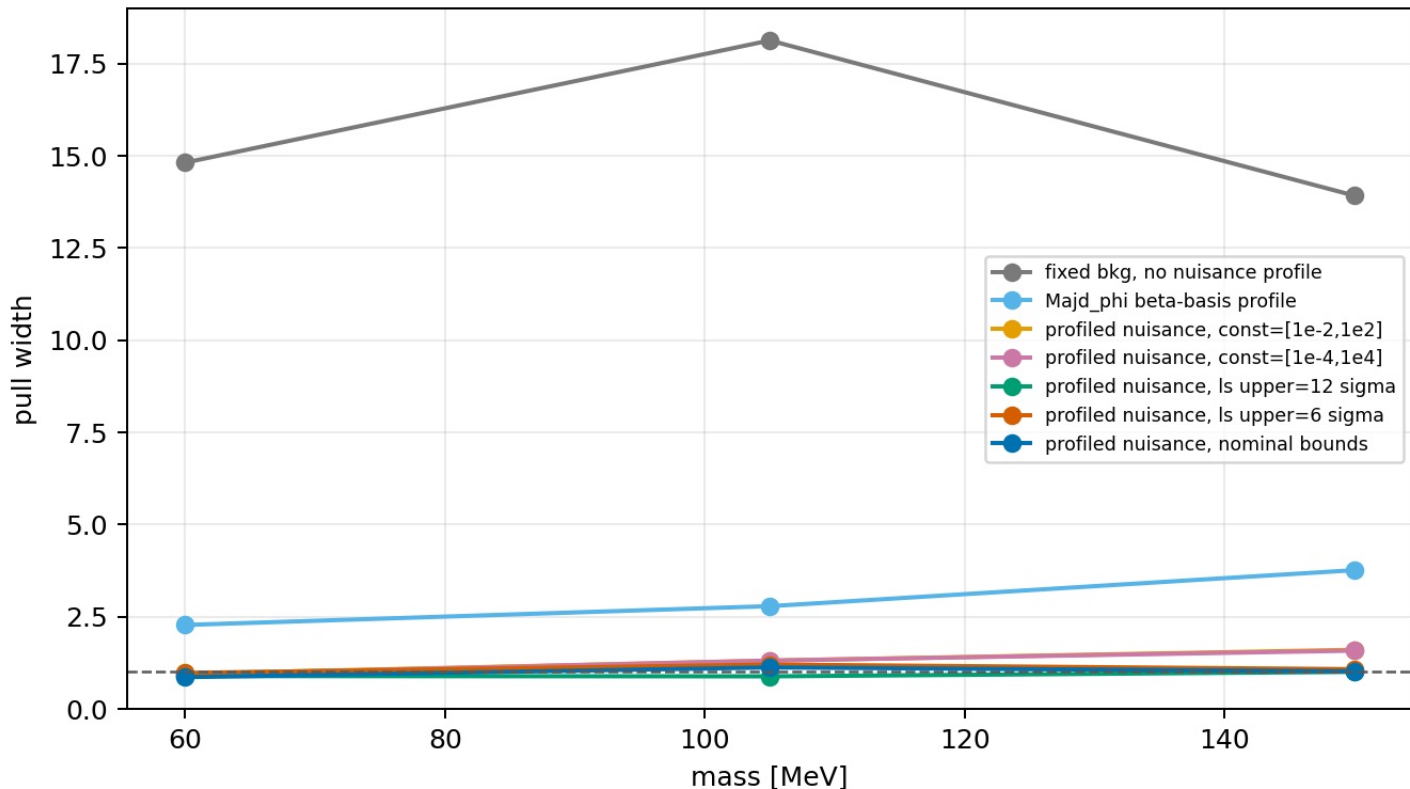

2016: median expected ϵ^2 95 proxy, 10 source toys

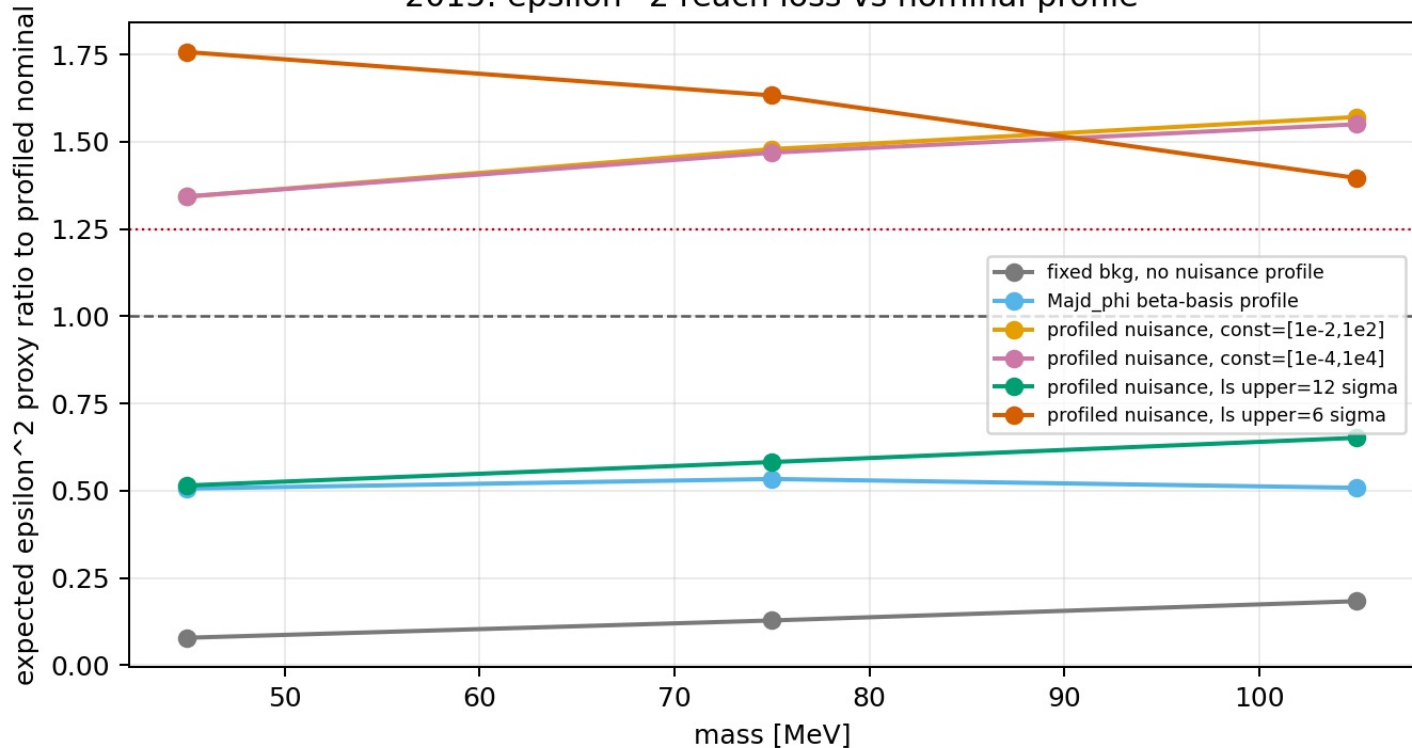

2016: mean pull, 10 source toys

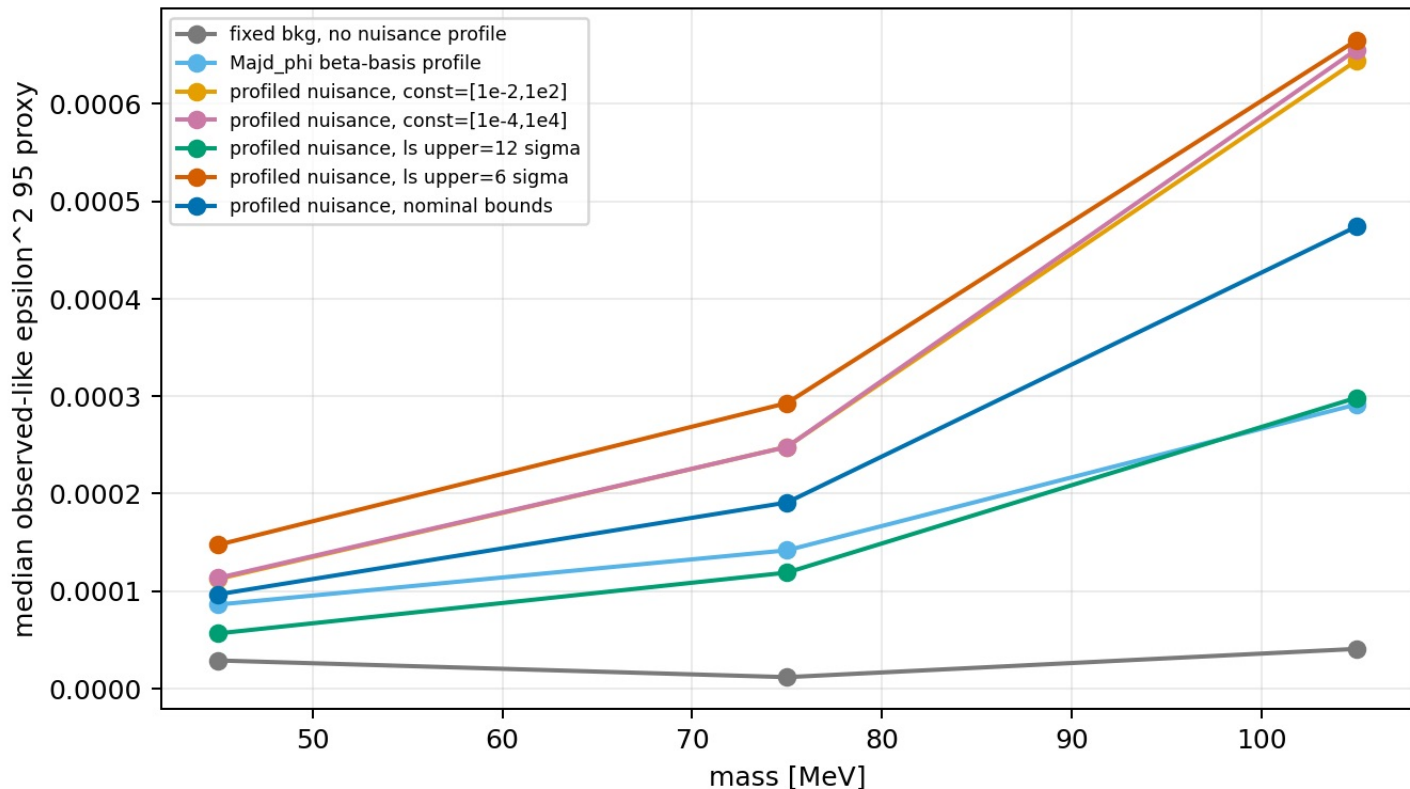

2016: pull width, 10 source toys

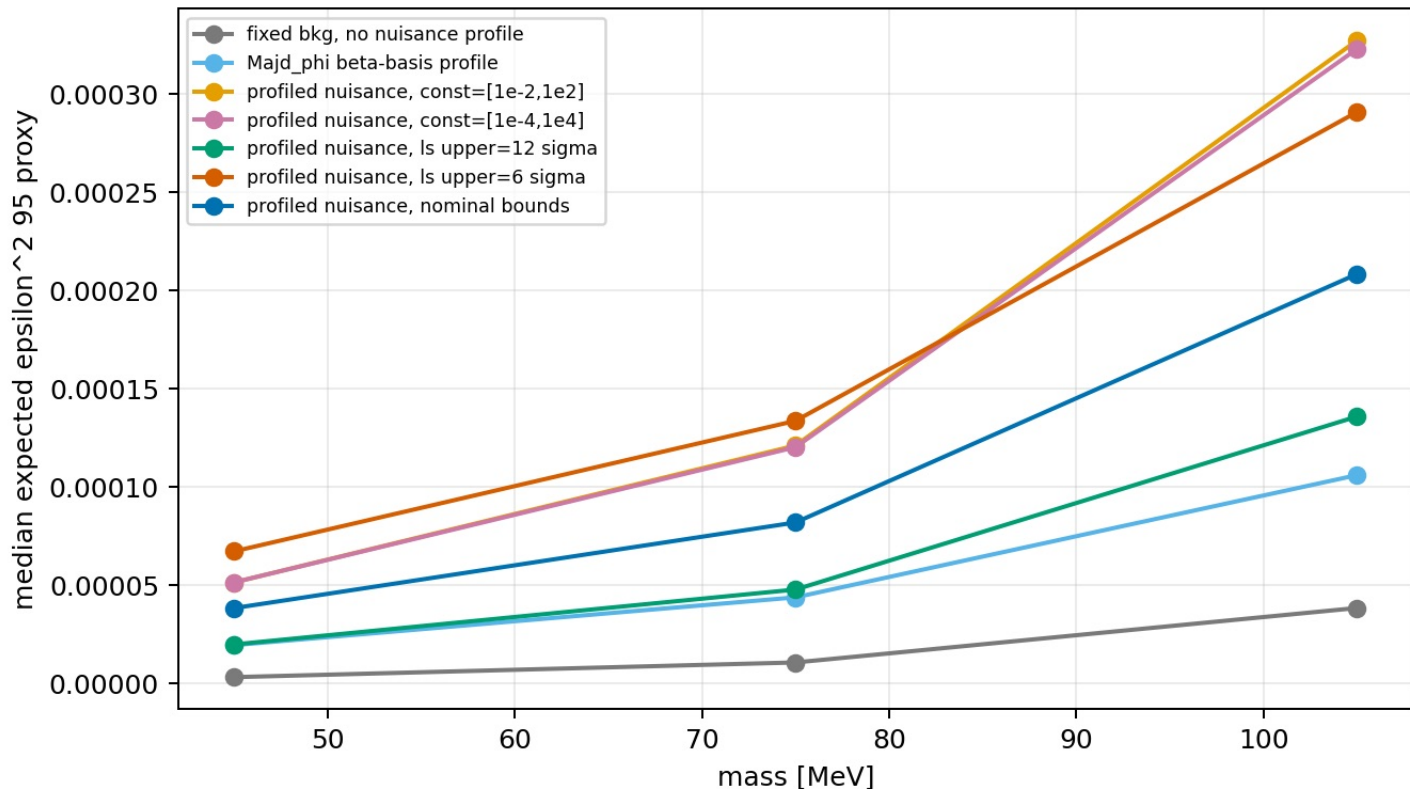

2015: epsilon^2 reach loss vs nominal profile

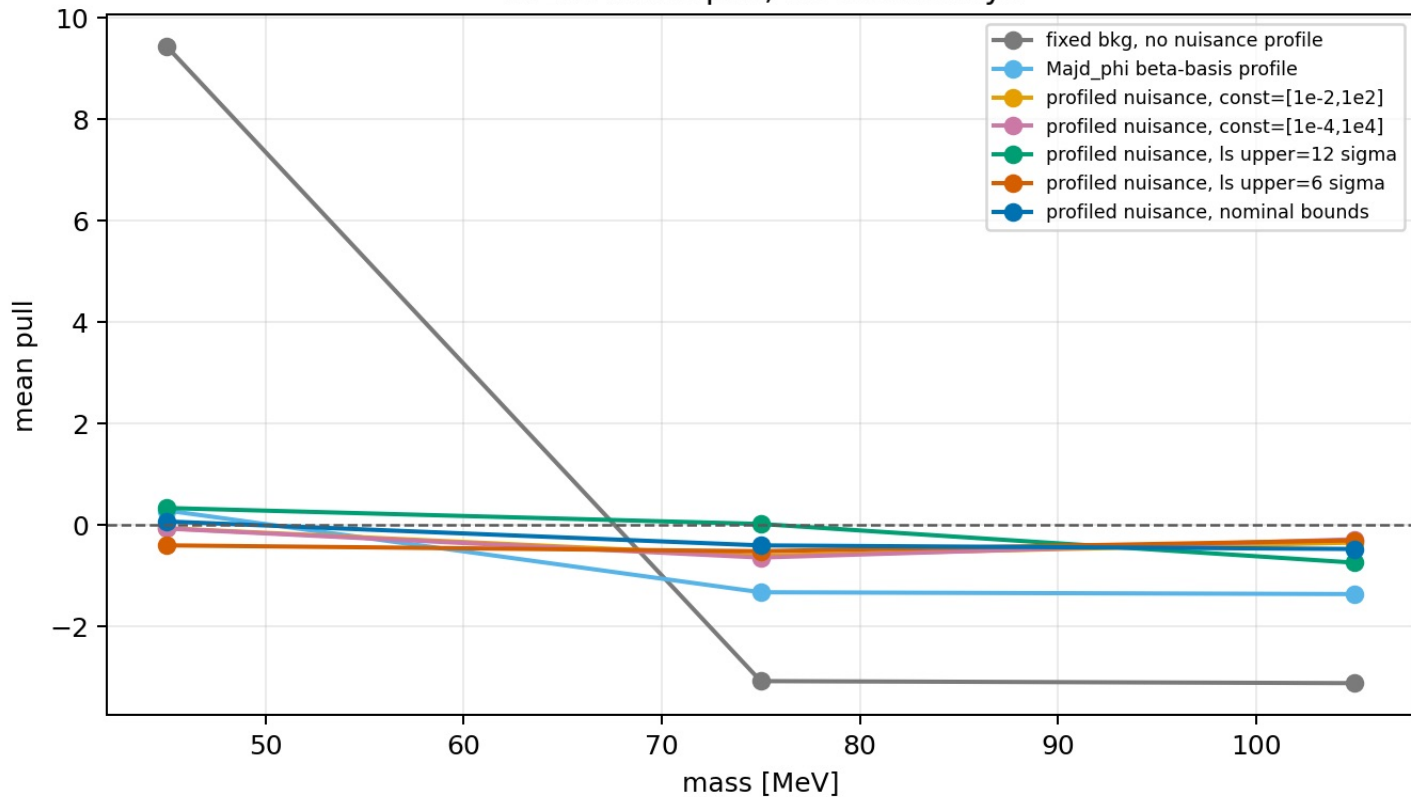

2015: median observed-like epsilon² 95 proxy, 10 source toys

2015: median expected epsilon² 95 proxy, 10 source toys

2015: mean pull, 10 source toys

2015: pull width, 10 source toys
