

Post-closure pull-blind ceiling remediation: K2 native 1% only

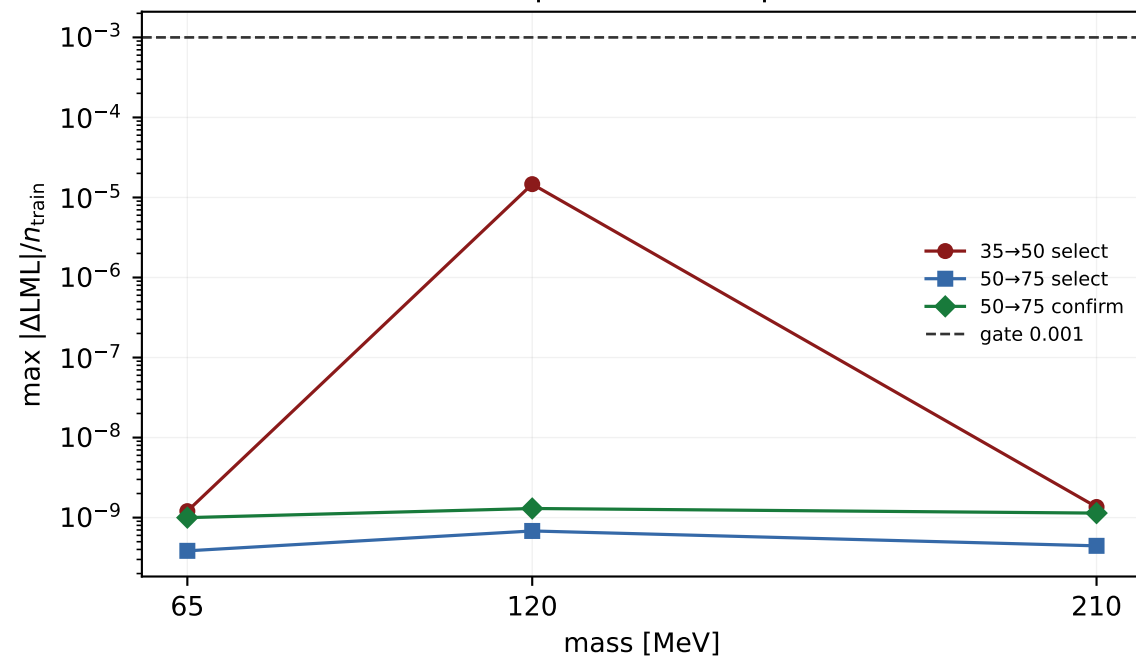

Selection: three fresh backgrounds per mass

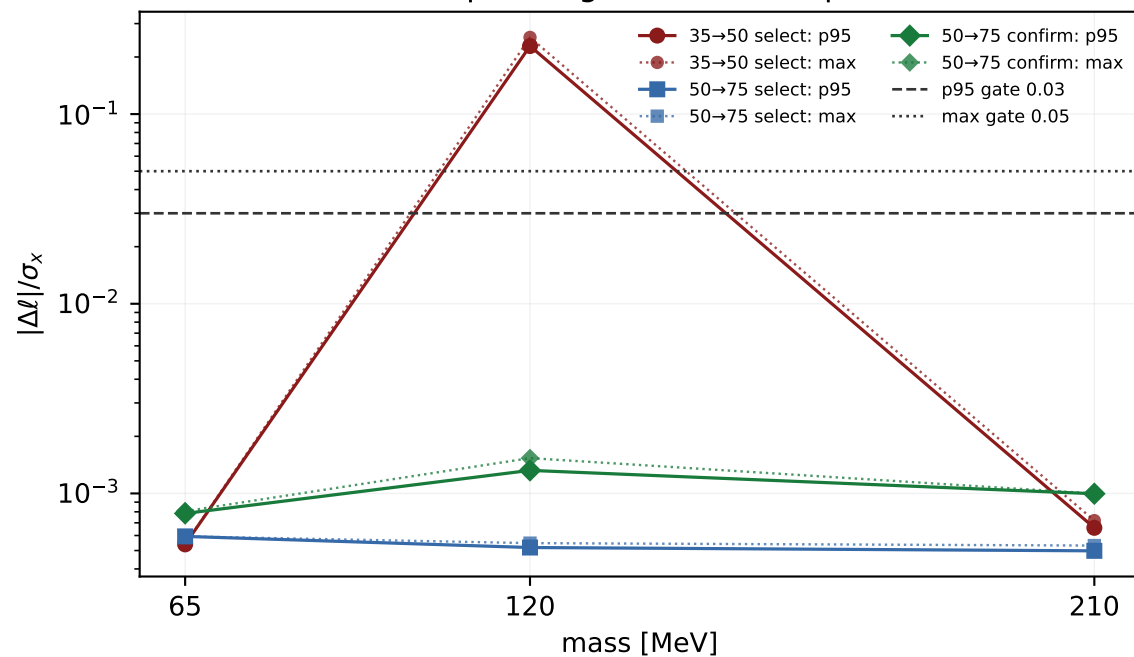

Confirmation: five fresh backgrounds per mass

Same-input likelihood plateau

Same-input length-coordinate plateau

Factor 35 fails at 120 MeV. Factor 50 versus the factor-75 sentinel passes all frozen gates in selection and confirmation. This does not re-evaluate the factor-25 closure or qualify a common all-lane ceiling.
