

All-three signal extraction at 66 MeV — local Z = 2.77 (not scan-corrected)

$\pm 2.25\sigma_m$ fit window
 Joint-profiled background
 Independent signed diagnostic
 Frozen GP mean
 Shared- ε^2 best fit
 Observed

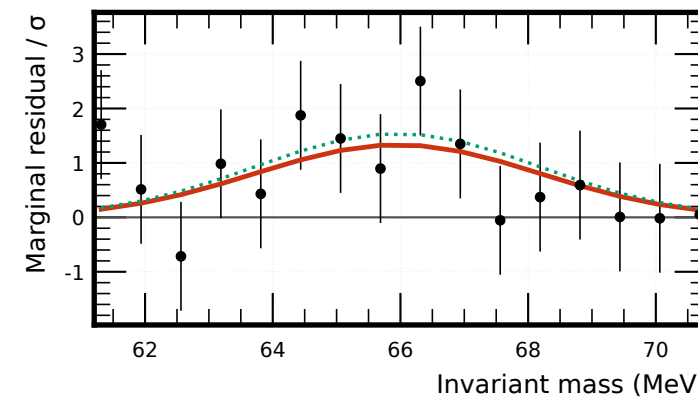

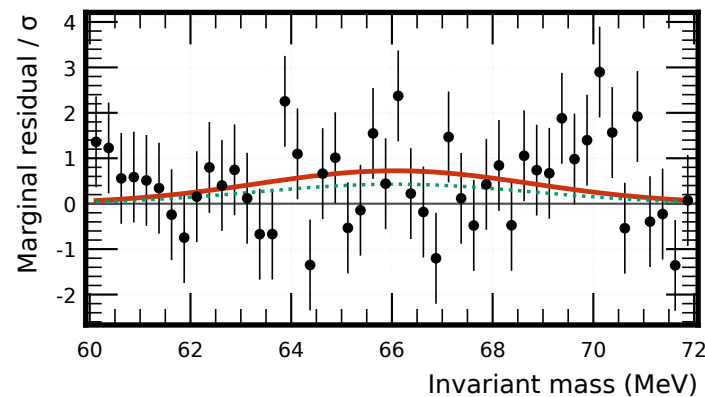

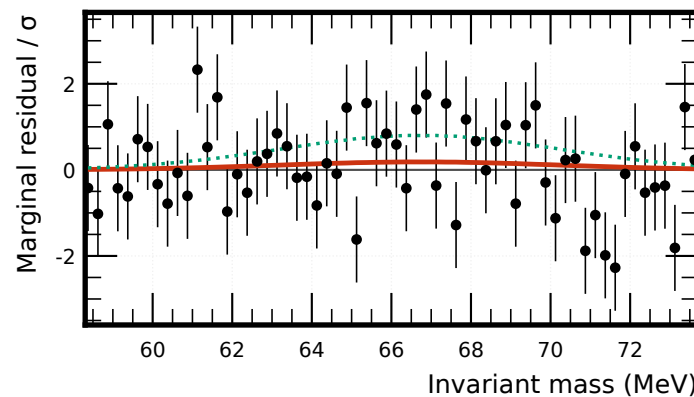

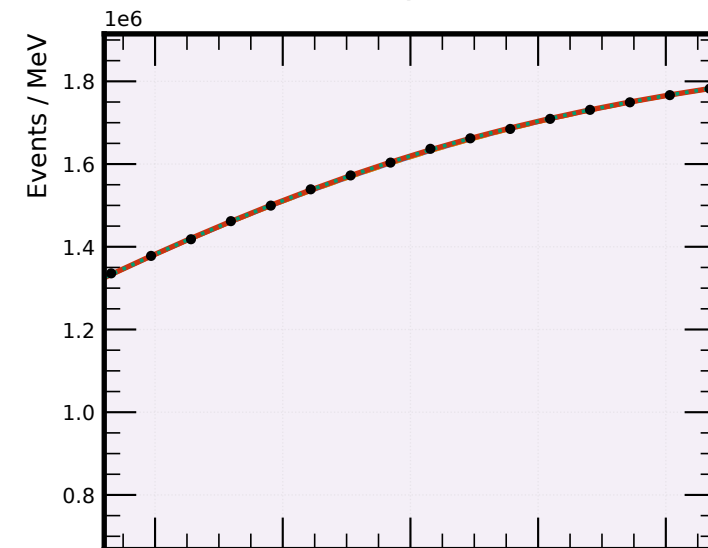

2015 — local display

2016 — local display

2021 — local display

Shared fit uses one common coupling; green signed fits are post-selection campaign-level concordance diagnostics, not independent measurements. Lower panels show descriptive marginal residuals, not calibrated pulls.
