 v16 TC: constant - - - v16 TC: quadratic ◆ v16 TC signal MC
 - - - v16 TC: linear

2021 v16 TC signal MC: core location and shift descriptions

Bars: sample SD of fitted centers across independent Poisson-bin replicas (32 by default); they describe MC statistics.
 Prediction test: omit one mass, fit the other masses, then predict the omitted core shift. No observed data or upper limits.
 TC and UC have different selection cuts; a TC-UC difference cannot be attributed solely to the vertex constraint.
