

2016 full data: conventional fits at GP-selected masses

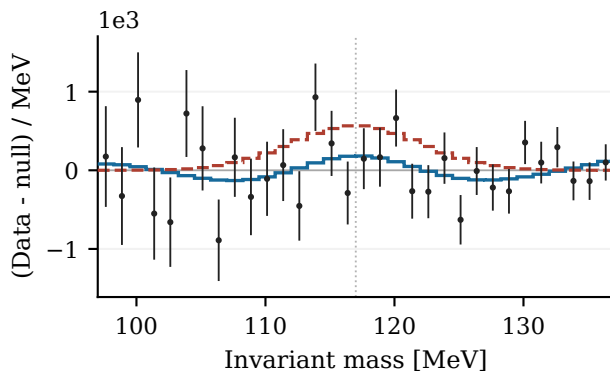

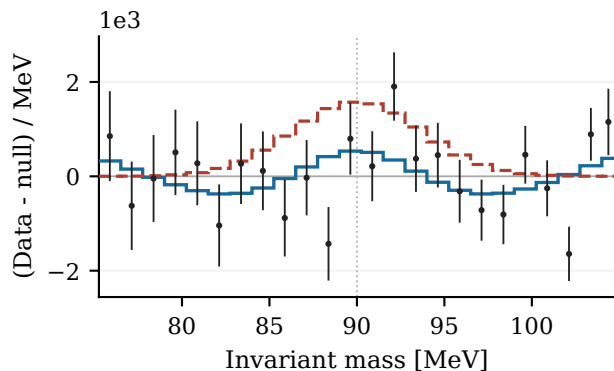

● Observed bins — Fitted total Profiled background --- Null background

90 MeV | degree 3, total 8σ
 $r = +2.00$; D/dof = 125.3/113
Display 1.25 MeV; last 0.75 MeV

117 MeV | degree 3, total 8σ
 $r = +1.53$; D/dof = 165.6/155
Display 1.25 MeV

— Fitted total - null background - - - Gaussian signal component

Fits use native bins; display groups sum whole bins. Counting errors only.
