

2015 signal extraction: the leading fluctuation and 20 MeV

- Sideband GP mean
- GP constraint ± 1 SD
- Background profiled with signal
- Signal + background
- Data

17.25 MeV | local $p_0 = 0.057$

20 MeV | local $p_0 = 0.438$

2015 full | GP support 12-28 MeV, stable ceiling 16 | Shading: fitted signal window

Counting error bars only. Residuals share fitted-background uncertainty; they are not independent significances.
