

2016 full: two leading observed excesses

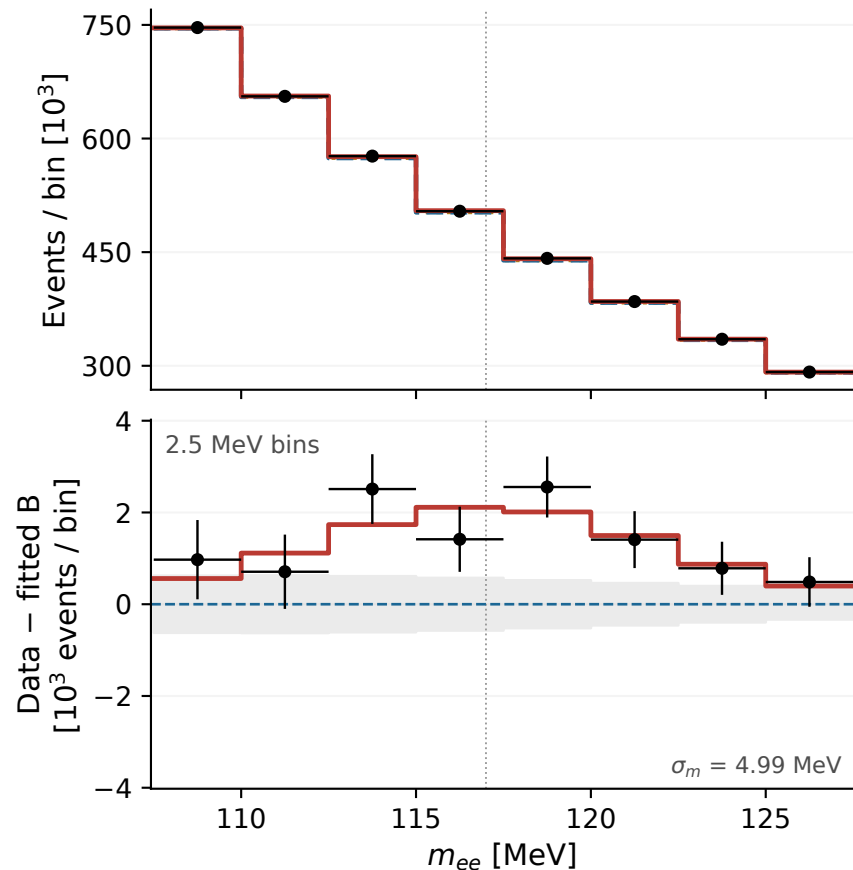

Separate single-dataset fits | observed-profiled ranking | display bins $\approx$ half the mass resolution

- Observed data
- Background fitted with signal
- GP constraint SD (width guide)
- ⋯ GP mean before profiling
- S+B (top); fitted S (bottom)

90 MeV: $r = +3.42$

117 MeV: $r = +3.28$

Selected after scanning. Local signed roots describe the fitted templates; these panels do not establish a global particle significance.

Bars: counting error only. Gray shading: zero-centered GP constraint width; not fitted-background error or total residual uncertainty.
