

2021 rigid threshold stress mean: pull-blind length-optimizer diagnostics
20 backgrounds per lane; factors 15, 20, 25; 50:20:250 MeV

■ exact upper occupancy ● raw comparable state ■ $|\log(C_U/C_L)|$ summary
▲ near upper occupancy (includes exact) ● $|\log(\ell_U/\ell_L)|$ summary —●— median and central 90% descriptive span

Occupancy denominators are reproducible selected states. Coordinate spans are descriptive, not confidence intervals. No factor/card selection is performed.
